

AXSDry is a complete set of online tools and databases designed for the dry bulk shipping industry. Hundreds of operators, brokers, charterers and financial institutions save time and effort by pooling their key information in one place. Members agree they make better decisions by easily interacting data with our powerful assessment and analysis tools. AXSDry enables you to have a complete view of the dry bulk shipping market – without having to sort through thousands of e-mails, or manage multiple programs on your desktop.

## **Confirmed success of AXSDry Voyage Calculator 3.0**

We're pleased to report very **positive feedback** from the more than 30 companies who have been beta-testing AXSDry Voyage Calculator's new 3.0 release for the past month.

AXSDry Voyage Calculator 3.0 is an interactive tool allowing brokers and charterers to quickly and easily take multiple factors into consideration when performing voyage estimations, such as vessel technical details including speed and consumptions, port draft and DAs, canal costs, unlimited route and cargo options, bunker and passage ports, distances, bunker prices, P&L and more. Results are immediately available on the same screen. Calculations can be saved and stored, and even safely and securely shared with colleagues or business partners.

***Being able to see the TCE and equivalent freight rate variances together with an estimated P&L for the respective vessel on one single screen places this calculator ahead of other tools on the market today.***

Users of AXSDry Voyage Calculator can work faster, manage more efficiently and plan better. Like all of AXSDry's interactive tools, AXSDry Voyage Calculator draws upon our extensive set of up-to-date knowledge databases.

The beta testing period has led us to add several more useful functions and tools, such as allowing users to **insert a start date** and **calculate ETAs for each sequence**; a **'direct inject' link** to the Calculator from the AXSDry Vessel Manager module's search results to **see spreads of different vessels**. And of course we have ironed out the

small bugs that are inevitable in a beta release.

***All users with access to the AXSDry module will have access to the new calculation module and all its enhanced features.***

AXSDry Calculator 3.0 brings significant improvements and functionalities; nevertheless, the previous version of the online tool will be available for use into the foreseeable future.

A full list of the new release's features can be found on our web site at [www.axsmarine.com](http://www.axsmarine.com).
